SCOPE OF WORK

modifications to portions of the first floor
(Rooms 117, 117-1, 2, 4, 5, and 21), Navy Yard, Washington, D.C. to allow for the installation and the environment for functioning of sensitive optical equipment. Modifications anticipated include, but are not limited to, foundations, mechanical systems, electrical systems, lighting, and partition changes.

STATINTL

- 2. The engineering phase of the project is to prepare a design for the required modifications to accommodate the equipment and to prepare the technical specifications and the construction drawings in such numbers as are required by the General Services Administration (GSA) (allowing for two extra sets of drawings and specifications for the sponsoring agency).
- 3. The engineering contractor is to provide such services as are required to accomplish the engineering phase of the work, including such surveys and investigations as may be required, the incorporation of such design data as has previously been acquired, and coordination with the manufacturer of the equipment and the representatives of the Government working with the manufacturer. Concept drawings are available and are to be used as guides for the engineering effort. The "black box" shown in the concept drawings is not a part of the scope of work in this contract.
- 4. The construction contract should provide for the completion of all construction work prior to 19 August 1969. In connection with this requirement, a CPM network should be specified targeting completion on that date.
